

EPower™ MODEL

Advanced Power Controller Specification Sheet

EPower™ is the Eurotherm® series of advanced power control units. Combining the advantages of the latest technologies and innovations to produce a truly impressive performance for your process.

Ratings

The EPower current ratings cover the range from 100 amps up to 400 amps (nominal 16 Amps to 400 Amps). Ratings are designed at 40°C, but operation can be defined up to 50°C with associated deratings.

The voltage rating can go up to a maximum of 690 volts.

Predictive Load management (patent pending)

You can reduce your energy costs across your plant by utilising the Predictive Load Management functionality within EPower. This innovative feature provides a better distribution of energy across different loads in your installation by managing the priority and if necessary, load shedding.

Many more features are available (Log file management, advanced alarm strategy, optional I/O...) to provide you with the best of the technology for your process.

Multi channel unit

EPower includes seven different power configurations within one unit, depending on the number of power modules fitted. From single phase configuration to two times two phase control, the unit is perfectly modular and configurable to your process and requirements. Multiple zones can be controlled with one unit.

Display

The large 4 lines x 10 characters display provides a clear and unambiguous indication of the process values. The four-line message centre provides custom or standard views of information that is important to you.

Communication

Eurotherm has an approach to open communications, offering standard fieldbus networks such as Profibus DP and DeviceNet® communications. The use of Ethernet and (Modbus TCP) also make integration into PLCs and other supervisory systems easy to accomplish and for legacy applications Modbus RTU.

Configuration

“Quick Start” HMI menus provide an easy and friendly way to quickly configure the unit. With the more complex configurations using the iTools software package.

Ideal for

- Glass furnaces
- Melt heat treatment
- Food processing
- Multi-channel heaters
- High temperature furnaces
- Induction heating
- Vacuum furnace
- Large extruders

Features

- Fully software configurable
- Predictive Load Management
- Current 100A to 400A (nominal load 16A to 400A)
- Operation up to 50°C
- Voltage up to 690V ac
- All types of firing modes
- Better than 1% measurement accuracy
- Large, four row display
- Multi-channel unit
- Log file
- Optional I/O
- Modbus
- Profibus
- DeviceNet® communication
- Ethernet
- Voltage, current and power control
- Complete diagnostics

SPECIFICATION

General Standards

The product is designed and produced to comply with BS EN60947-4-3 (Low voltage switch gear and control gear). Other applicable standards are cited where appropriate.

Installation Categories

General installation category details for the driver and power units are summarised in the table below.

	Installation Category	Rated impulse withstand voltage (Uiimp)	Rated insulation voltage
Communications Standard I/O	II	0.5kV	50V
Driver module power	II	0.5kV	50V
Relays	III	2.5kV	230V
Power Modules (up to 600V)	III	4kV	230V
Power Modules (690V)	II	6kV	600V
Auxiliary (fan) supply	II	2.5kV	230V

Power (at 40°C)

Caution

Although the driver module supply voltage range is 85 to 265V ac, the fans (if any) fitted to the power (thyristor) modules are specified for use at one of 115V ac or 230V ac as specified at time of order. Before plugging the fan harness into the driver module, ensure that the utility supply voltage is suitable for the fan(s). Otherwise, fan life may be shortened or the cooling effect may not be sufficient, either case presenting a possible hazard to the equipment or to the operator.

Driver module

Voltage range: 85 to 265V ac
Frequency range: 47 to 63Hz
Power requirement: 60W + Power Module fans
(15W each for 400A power modules;
10W each for 160A/250A modules)

Power module

Number of modules: Up to four identical units per driver unit
Voltage range: 100 to 600V ac (+10% - 15%) or 100 to 690V ac (+10% - 15%) as specified at time of order
Frequency range: 47 to 63Hz
Nominal current: 16 to 400A depending on power module
Power dissipation: 1.3W per Amp per phase

Cooling

Up to and including 100A: Natural convection
Above 100A: Fan cooling. Fans are connected in parallel to driver module connector
Fan supply voltage: 115 or 230V ac, as specified at time of order (see 'Caution' above)
Fan power requirement: 10VA for 160A/250A modules;
15VA for 400A modules

Protection Thyristor drive: RC circuits and high-speed fuses (Type 1)
Pollution degree: Pollution degree 2 (EN60947-1)

Rated short circuit conditional current: 92kA
Utilisation categories AC51: non inductive or slightly inductive loads, resistance furnaces
AC56a: switching of transformers
Duty cycle: Uninterrupted duty/continuous operation
Form designation:
Short circuit protection co-ordination type: Type1
Load types: Single or multiphase control of resistive loads (low/high temperature coefficient and non-aging/aging types) and transformer primaries. Load voltage/current feedback either internal (standard) or external (option for use with transformer secondaries for example)

Physical

Dimensions and fixing centres

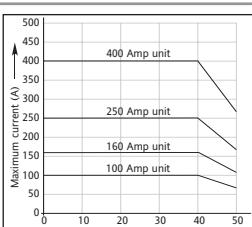

Weight:
(including 2kg for driver module)

See Fixing Details

Current	1 phase	2 phases	3 phases	4 phases
100A	6.5kg	11.0kg	15.5kg	20.0kg
160A	6.9kg	11.8kg	16.7kg	21.6kg
250A	7.8kg	13.6kg	19.4kg	25.2kg
400A	11.8kg	21.6kg	31.4kg	41.2kg

Environment

Temperature limits Operating: 0°C to 50°C (derate above 40°C as per accompanying curves)
Storage: -25°C to 70°C

Atmosphere:

Non-explosive, non-corrosive and non-conductive

Humidity limits:

5% to 95% RH (non-condensing)

Altitude (maximum):

2000 metres

Protection:

IP10 (EN60529)

External wiring:

Shock (EN60068-2-29):

Must comply with IEC 364

Vibration (EN60068-2-6):

10g PK; 6mS duration; 10 bumps

67-150Hz at 1g

EMC

Standard:

EN60947-4-3 Emissions class A

This product has been designed for environment A (Industrial). Use of this product in environment B (domestic, commercial and light industrial) may cause unwanted electromagnetic disturbances in which cases the user may be required to take adequate mitigation measures.

Immunity criterion 1 (criterion 3 for voltage dips and short-time interruptions)

Operator Interface

Display:

4 lines of up to 10 characters each. Display pages can be used to view process variable values and to view and edit the configuration of the unit. (Editing of the configuration is better carried out using configuration software (iTools). In addition to the standard displays, up to four 'custom' pages can be defined which allow bargraph displays, text entry etc.

Character format: 7 high x 5 wide yellow-green LCD dot matrix array

Push buttons: 4 push buttons provide page and item entry and scroll facilities

LED indicators (beacons): 3 indicators (PWR LOC and ALM) are supplied to indicate that power is applied, that Local Control is selected and that there is one or more active alarm respectively

Standard Inputs/Outputs (SK1)

All figures are with respect to driver module 0V, unless otherwise stated.

Number of inputs/outputs

No of analogue inputs: 2

No of analogue outputs: 1

No of digital inputs/outputs: 2 (each configurable as an input or an output)

10V (Potentiometer) supply: 1

Update rate:

Twice the mains frequency applied to power module 1. Defaults to 41.6Hz (24ms) if no power applied to power module1 or if the frequency lies outside the range 47 to 63Hz

Termination: Removable 10-way connector. (5.08 mm. pitch)

ANALOGUE INPUTS

Performance: See Tables 1 and 2

Input types: Each input is configurable as one of: 0 to 10V, 1 to 5V, 2 to 10V, 0 to 5V, 0 to 20mA, 4 to 20 mA

Absolute maxima + terminal: ±16V or ±40mA

- terminal: ±1.5V or ±300mA

Analogue input: Voltage input performance

Parameter	Typical	Max/Min
Total voltage working input span (note 1)		-0.25V to +12.5V
Resolution (noise free) (note 2)	13 bits	
Calibration error (notes 3, 4)	<0.25%	<0.5%
Linearity error (note 3)		±0.1%
Ambient temperature error (note 3)		<0.01%/°C
Input resistance (+ve terminal)		>140kΩ
Input resistance (-ve terminal)	150Ω	
Allowable voltage (-ve terminal to 0V)		±1V
Series mode rejection of mains interference	46dB	>30dB
Common mode dc rejection	46dB	>40dB
Hardware response time	5ms	

Note 1: w.r.t. to the relevant -ve input

Note 2: w.r.t. total working span

Note 3: % of effective range (0 to 5V, 0 to 10V)

Note 4: After warm up. Ambient = 25°C

Table 1 Analogue input specification table (voltage inputs)

Analogue input: Current input performance

Parameter	Typical	Max/Min
Total current working input span		-1mA to +25mA
Resolution (noise free) (note 1)	12 bits	
Calibration error (notes 2, 3)	<0.25%	<0.5%
Linearity error (note 2)		±0.1%
Ambient temperature error (note 2)		<0.01%/°C
Input resistance (+ve to -ve terminal)	235Ω	
Input resistance (-ve terminal)	150Ω	
Allowable voltage (-ve terminal to 0V)		<±1V
Series mode rejection of mains interference	46dB	>30dB
Common mode dc rejection	46dB	>40dB
Hardware response time	5ms	

Note 1: w.r.t. total working span

Note 2: % of effective range (0 to 20mA)

Note 3: After warm up. Ambient =25°C

Table 2 Analogue input specification table (current inputs)

ANALOGUE OUTPUTS

Performance:	See Tables 3 and 4
Output types:	Each output is configurable as one of 0 to 10V, 1 to 5V, 2 to 10V, 0 to 5V, 0 to 20mA, 4 to 20 mA
Absolute maxima + terminal:	(-0.7V or -300mA) or (+16V or +40mA)
0V terminal:	±2A

Analogue output: Voltage output performance		
Parameter	Typical	Max/Min
Total voltage working span (within ±20mA (typ.) current span)		-0.5V to +12.5V
Short circuit current		<24mA
Resolution (noise free) (note 1)	12.5 bits	<0.5%
Calibration error (note 2, note 3)	<0.25%	<0.5%
Linearity error (note 2)		<±0.1%°C
Ambient temperature error (note 2)		<0.01%°C
Minimum load resistance		>800Ω
DC output impedance		<2Ω
Hardware response time (10% to 90%)	20ms	<25ms

Note 1: w.r.t. total working span
Note 2: % of effective range (0 to 5V, 0 to 10V)
Note 3: After warm up. Ambient = 25°C

Table 3 Analogue output specification table (voltage outputs)

Analogue output: Current output performance		
Parameter	Typical	Max/Min
Total current working span (within -0.3V to +12.5V voltage span)		-24mA to +24mA
Open circuit voltage		<16V
Resolution (noise free) (note 1)	12.5 bits	<0.5%
Calibration error (note 2, note 3)	<0.25%	<0.5%
Linearity error (note 2)		<±0.1%°C
Ambient temperature error (note 2)		<0.01%°C
Maximum load resistance		<550Ω
DC Output conductance		<1μA/V
Hardware response time (10% to 90%)	20ms	<25ms

Note 1: w.r.t. total working span
Note 2: % of effective range (0 to 20mA)
Note 3: After warm up. Ambient = 25°C

Table 4 Analogue output specification table (current outputs)

10V SUPPLY (POTENTIOMETER SUPPLY)

Output voltage: $10.3V \pm 0.3V$ @ 5.5mA

Short circuit o/p current: 15mA max.

Ambient temperature drift: $\pm 0.012\%/\text{°C}$ (typ); $\pm 0.04\%/\text{°C}$ (max.)

Absolute maxima Pin 1: (-0.7V or -300mA) or (+16V or +40mA)

DIGITAL I/O

Hardware response time: 100μs

Voltage inputs

Active level (high): 4.4V < Vin < 30V

Non-active level (low): -30V < Vin < +2.3V

Input impedance: 10kΩ

Contact closure input

Source current: 10mA min; 15mA max

Open contact

(non active) resistance: >500Ω

Closed contact

active) resistance: <150Ω

Current source output

Source current: $9mA < I_{source} < 14mA$ @ 14V

$10mA < I_{source} < 15mA$ @ 0V

$9mA < I_{source} < 14mA$ @ -15V

Open circuit voltage: <14V

Internal pull-down resistance: 10kΩ (to 0V)

Absolute maxima + terminal: ±30V or ±25mA

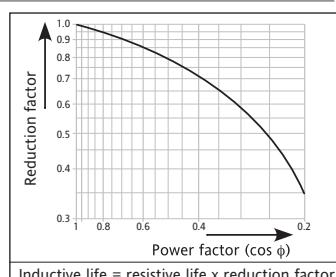

- terminal: ±2A

Notes:

1. Absolute maximum ratings refer to externally applied signals
2. The 10V potentiometer supply is designed to supply two 5kΩ potentiometers connected in parallel with one another.
3. The maximum current for any 0V terminal is ±2A.

Relay Specification

The relays associated with this product have gold plated contacts applicable to 'dry circuit' (low current) use.

Contact life Resistive loads: 100,000 operations (de-rate with inductive loads as per figure)

High power use Current: <2A (resistive loads)
 Voltage: <264V RMS

Low power use Current: >1mA
 Voltage: >1V

Contact configuration: Single pole change-over (One set of Common, Normally Open and Normally Closed contacts)

Termination Relay 1 (standard): 3-way connector on underside of driver unit
 Watchdog relay (standard): 3-way connector on underside of driver unit
 Relays two to four (option): 12-way option module connector

Absolute max switching capability: <2A at 240V RMS (resistive loads)

Note: Normally closed and normally open refer to the relay when the coil is not energised.

Optional Input/Output Modules (SK3, SK4, SK5)

Up to three input/output modules can be fitted, each containing the inputs and outputs detailed below. Unless otherwise stated below, the specification for the optional I/O (including relays) is as given above for the standard I/O.

Termination Removable 12-way (5.08mm pitch) connector per module

Number of modules: Up to 3
 Number of inputs: 1 analogue input and 2 digital inputs per module
 Number of outputs: 1 analogue output per module
 Number of relays: 1 set of common, normally open and normally closed contacts per module

10V potentiometer supply output voltage: 10.0V ±0.3V at 5.5mA

Mains Network Measurements

All network measurements are calculated over a full mains cycle, but internally updated every half-cycle. For this reason, power control, current limits and alarms all run at the mains half-cycle rate. The calculations are based on network waveform samples, taken at a rate of 20kHz. Measurements on each network phase are synchronised to its own phase and if the line voltage cannot be detected, the measurements will stop for that phase. It should be noted that, depending on the network configuration, the phase voltage referred to is one of:

- a. the line voltage referenced to neutral in four star,
- b. the line voltage referenced to neutral or another phase for single phase networks or
- c. the line voltage referenced to the phase applied to the next adjacent power module for three phase star or delta networks.

The parameters below are directly derived from measurements for each phase.

Accuracy (20 to 25°C)

Line frequency (F): ±0.02Hz

Line RMS voltage (Vline): ±0.5% of Nominal Vline

Load RMS voltage (V): ±0.5% of Nominal V

Thyristor RMS current (I): ±0.5% of Nominal I

Load RMS voltage squared (Vsq): ±1% of (Nominal V)²

Thyristor RMS current squared (Isq): ±1% of (Nominal I)²

True load power (P): ±1% of (Nominal V) x (Nominal I)

Frequency resolution: 0.01Hz

Measurement resolution: 11 bits of Nominal value (noise free)

Meas. drift with ambient temp: <0.02% of reading /°C

Further parameters (S, PF, Q, Z, lavg, lsqBurst, lsqMax, Vavg, Vsq Burst, VsqMax and PBurst) are derived from the above, for each network (if relevant). See EPower User Guide Section 6.19.1 (Meas submenu) for further details.

Communications

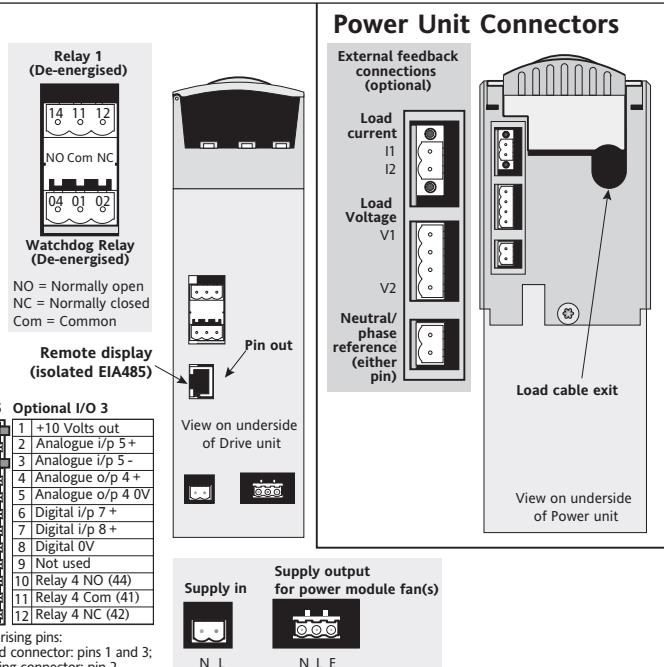

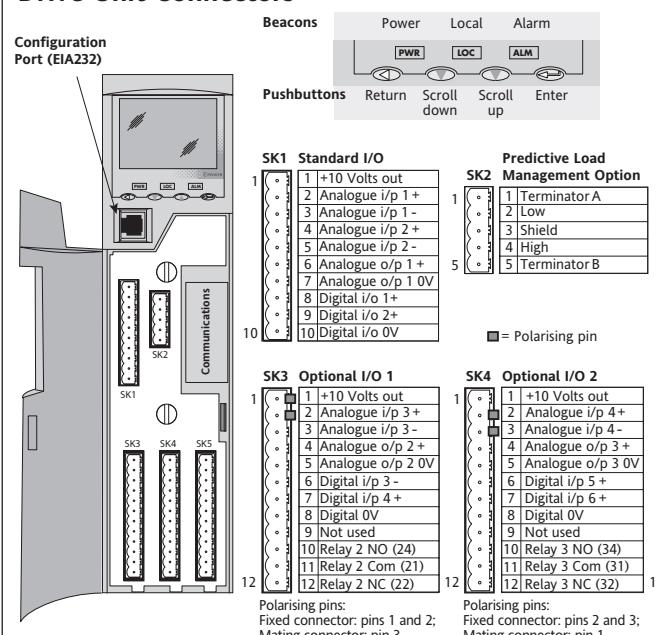

Ethernet Type: 10baseT (IEEE802.1)
 Protocol: Modbus TCP
 Connector: RJ45 with indicators
 (Green = Tx activity; Yellow = Network activity)

Modbus RTU Protocol: Modbus RTU slave
 Transmission standard: 3-wire EIA485
 Connector: Twin, parallel-wired RJ45, with indicators
 (Green = Tx activity; Yellow = Rx activity)

Isolation (EN60947-4-3): Installation category II, Pollution degree 2
 Terminals to ground: 50V RMS or dc to ground (double isolation)

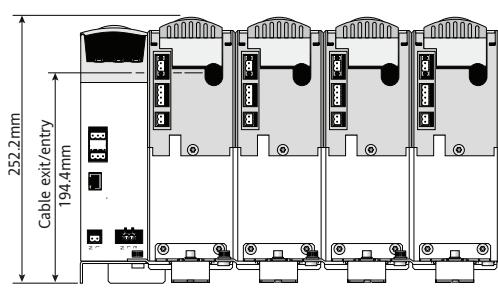

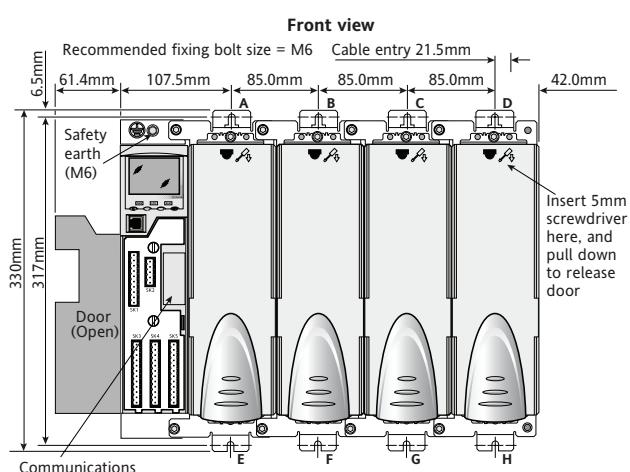

ELECTRICAL INSTALLATION

Drive Unit Connectors

ORDER CODES

The code is divided in three sections:

- 1 Hardware, which defines the type, number and size of the unit and/or the modules.
- 2 Optional hardware and software functions.
- 3 QuickStart which is intend to configure the unit for maximum 60 to 80% of the application (single unit in 1, 2 or 3 legs configuration)

The code can then be either “Short” and include only the main hardware fields or “medium” and combine the hardware + the optional fields, or finally “Long” with the additional quick start code at the end.
